[Getting Started](#)[Examples](#)Extract URL from attachment

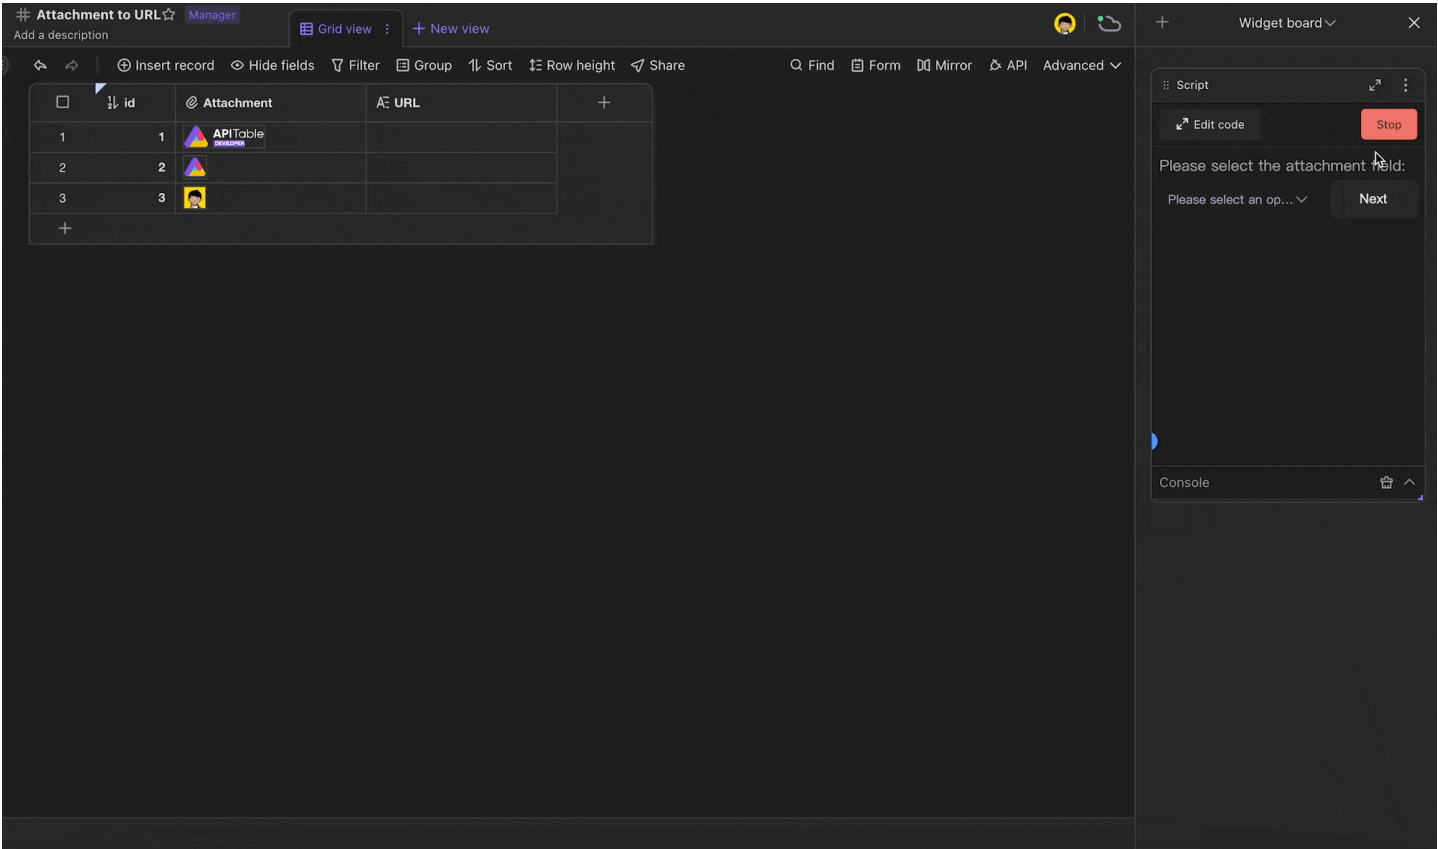

On this page

Extract URL from attachment

ⓘ INFO

Support converting attachments into links that can be accessed directly

Demo

Source code

```

const datasheet = await space.getActiveDatasheetAsync();

const attachmentField = await input.fieldAsync(
  "Please select the attachment field:",
  datasheet
);
const urlField = await input.fieldAsync(
  "Please select the URL field:",
  datasheet
);

const isCover = await input.textAsync(
  "Whether to overwrite existing URLs (yes/no):"
);

// If the value entered in "Whether to overwrite the existing URL" is not "Yes" or "No", a relevant prompt will be
if (isCover !== "yes" && isCover !== "no") {
  output.text("Please enter the correct value!!!");
} else {
  const urlFieldId = urlField.id;
  const attachmentFieldId = attachmentField.id;

  const records = await datasheet.getRecordsAsync();

  for (let record of records) {
    const recordId = record.id;
    const attachmentCellValue = record.getCellValue(attachmentFieldId);
    const urlCellValue = record.getCellValueString(urlFieldId);
    //The empty data does not belong to the content to be converted into URL, so it is skipped
    if (attachmentCellValue == null) continue;
    if (isCover === "no" && urlCellValue !== null) continue;
    // Get the url value of the attachment
    const url = attachmentCellValue[0].url;
    datasheet.updateRecordAsync(recordId, { [urlFieldId]: url });
  }

  output.text("Attachment converted to URL!!!");
}

```
