

agentchat.contrib.capabilities.agent_capability

AgentCapability Objects

```
class AgentCapability()
```

Base class for composable capabilities that can be added to an agent.

add_to_agent

```
def add_to_agent(agent: ConversableAgent)
```

Adds a particular capability to the given agent. Must be implemented by the capability subclass. An implementation will typically call `agent.register_hook()` one or more times. See `teachability.py` as an example.
